

Simplified iManage administration and monitoring

KEY BENEFITS

- Improved security replacing direct data access for tools with authorized data access controlled by iManage server
- Administrative flexibility through a responsive web-based administration interface available from anywhere using any device
- Increased agility through reduced reliance on customizations allowing easier, faster upgrades
- Reduced TCO through use of in-built tools, tested and validated by iManage

As work product management systems gain higher adoption, the volume of data and complexity of managing the application can increase. In some cases, customers are developing or using custom tools to address key administrative jobs. These tools can create risk and impede the ability to more quickly upgrade to new versions of iManage software as the tools must be updated and revalidated with a new release, increasing cost and time expended.

In a cloud deployment, custom administrative tools cannot be allowed direct access to backend data or storage like SQL without compromising security requirements.

iManage Control Center

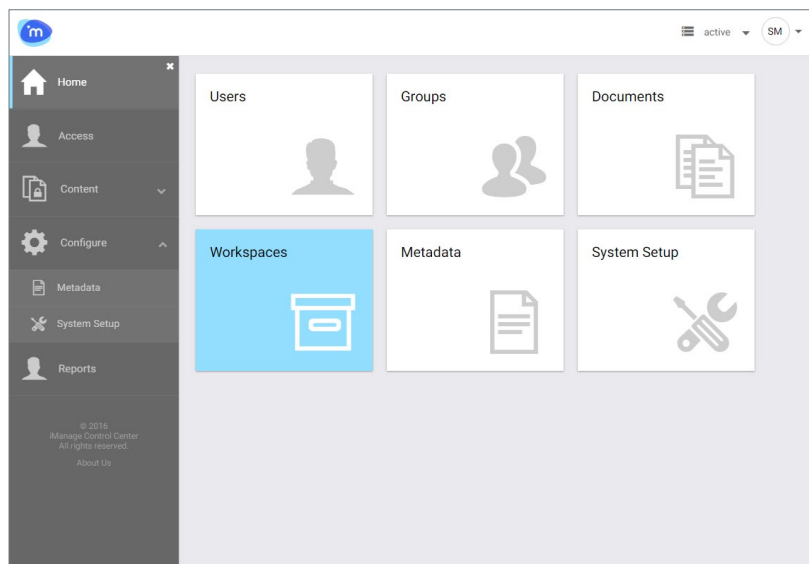

iManage Control Center provides you with a central console to control all core functionality within the iManage products. iManage Control Center eliminates the need for 2-tier tools which access data directly, providing authentication and authorization control for specific functions within iManage products.

iManage Control Center is offered out-of-the-box with iManage products, eliminating the need for customers to craft custom tools or scripts to perform key administrative jobs within their deployments.

iManage Control Center is compatible with iManage Work 9.5 and higher, and works with either on-premises implementation or in the iManage Cloud.

IMANAGE WORK PRODUCT MANAGEMENT

- **iManage Work:** Secure document and email management
- **iManage Share:** Secure governed file sharing and collaboration
- **iManage Insight:** Enterprise content search and analysis
- **iManage Govern:** Archiving, Records, Threat detection and Security Policy Management

iManage Control Center makes it easier to administer the iManage Work user base and information at any time, from any device

**MANAGE ALL CLIENT WORK PRODUCT
IN SINGLE UNIFIED ELECTRONIC MATTER
FILES BY CLIENT AND ENGAGEMENT**

Key iManage Control Center Features

Role-Based Administration

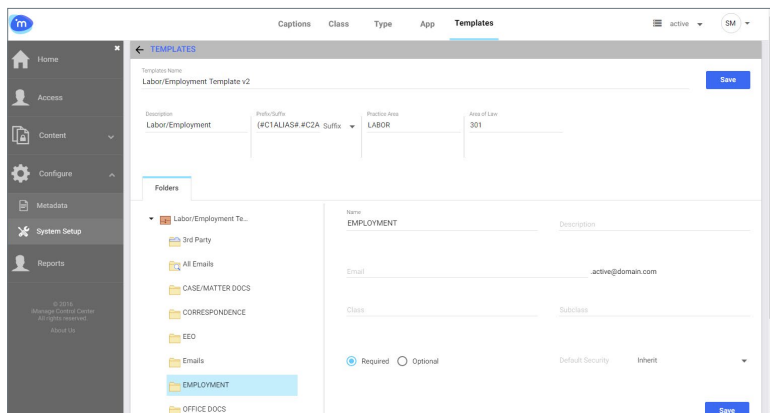

Help desk tasks in today’s global workplace are distributed across time zones and often outsourced. iManage Control Center offers the ability to tier administrators ensuring help desk personnel, contractors and power users only receive as much administration privilege as they need. This Tier-Based Administration reduces risk while delegating tasks to appropriate support staff.

User, Group and Metadata Management

Administrators can now perform key management functions, such as unlocking a user or adding a piece of metadata to a file, directly from their device, thanks to iManage Control Center’s web-based console. Previously, administrators needed access to the actual physical server to perform these tasks. Web-based access speeds up completion of these tasks while enhancing security by reducing access to the physical server.

Flexible Folders

Firms have long sought to balance the need for an engagement structure with the need to not overwhelm users with too many folder choices. The Flexible Folders feature provides users flexibility in creating folders while maintaining the firm’s defined structure. A simpler folder structure encourages proper filing.

Templates ease the process of creating a flexible folder structure

iManage Control Center makes it easier for help desk staff and system administrators to administer the iManage Work user base and information at any time, from any device — allowing them to be more responsive to their users’ needs.
