iManage Delivers Robust Security Solutions to Global Law Firm Thompson & Knight

CHICAGO – February 22, 2018 – iManage, the company dedicated to transforming how professionals work, today announced that Thompson & Knight LLP – one of the most highly recognized law firms with a strong focus in the energy industry – has selected iManage to deliver robust security applications to protect the firm.

Thompson & Knight will deploy two iManage applications – iManage Security Policy Manager and iManage Threat Manager – to seamlessly protect critical client information. iManage Security Policy Manager will manage ethical walls, segment data and enforce the firm's "need-to-know" security policies as those demands grow. iManage Threat Manager will guard the firm against internal and external threat actors by using machine learning and adaptive behavioral modeling to detect anomalous behavior patterns.

"We continue to make strategic investments in technology designed to further protect our clients' data," said John Barney, Chief Information Officer, Thompson & Knight. "Adding iManage's state-of-the art security applications will be extremely valuable for us in this endeavor. We already rely heavily on iManage Work for document management and now iManage's Security Policy Manager and Threat Manager will deliver the functionality our clients and our internal risk and compliance teams demand without compromising attorney productivity. Combining all of these features from a single vendor is a huge advantage."

iManage Security Policy Manager and iManage Threat Manager are completely integrated with iManage Work and provide the firm with comprehensive functionality delivered with rapid implementation and increased IT agility. Together, these products will enable Thompson & Knight to accelerate their data loss prevention program by taking a holistic approach to defining and managing policies that protect sensitive information at all levels.

"The unique challenge facing professional services firms is protecting sensitive client information to higher and higher standards without intruding on the work of the professionals who interact with that information every day," said Dan Carmel, Chief Marketing Officer, iManage. "By tightly integrating security and governance with core productivity applications, iManage has created a unique and seamless way to work that is as secure as it is enabling. Thompson & Knight's selection of iManage security applications demonstrates that firms today

see the tremendous value of seamlessly integrated applications from a trusted vendor to better respond to changing security and business needs."
