

The next-generation iManage platform for law firms

iManage unifies matters, documents, communications, expertise, and AI in one governed platform, so your firm works faster, keeps every engagement secure, and puts AI to work on content it can trust.

The pressures law firms face today

- ✗ **Fragmented matter knowledge:** Matter history lives across email threads, shared drives, and individual inboxes, so lawyers spend hours reconstructing context the firm already holds.
- ✗ **Precedents you can't find:** Prior work, negotiated positions, and hard-won expertise exist somewhere in the firm but are often unfindable when they're needed.
- ✗ **Constant context-switching:** Every jump between tools breaks momentum on work that demands sustained focus.
- ✗ **Ungoverned AI sprawl:** A growing set of AI tools pulls firm content outside controlled environments, creating data security and ethical wall risks.
- ✗ **AI that returns generic answers:** AI is only as good as the content beneath it, and unstructured, siloed, over-retained content produces inaccurate, indefensible answers.
- ✗ **Knowledge that walks out the door:** When senior partners retire, the reasoning behind the firm's positions and the judgment built over decades leaves with them.

What changes with iManage

- ✓ **See the complete picture of every matter:** Reveal every matter and project in one secure, governed foundation — documents, communications, people, experts, activity, and business context. AI email filing and classification folds every conversation into its matter, so nothing stays lost in an inbox.
- ✓ **Enrich your knowledge:** The iManage context fabric classifies and enriches your knowledge, reveals the relationships and connections across it, and layers in real-time activity about what agents and people are doing.
- ✓ **AI that knows your work as well as you do:** Ground legal teams in the context fabric to understand what's happening, inform strategy, and drive next steps, while you stay in control of what AI can see, touch, and do.
- ✓ **Get to AI value faster:** Give every AI the right context to deliver stronger results, in iManage or in a connected tool through the iManage MCP Server, surfacing only what's relevant then writing back work into iManage.
- ✓ **Security and governance built for AI:** Define an ethical wall once, and it cascades everywhere: access stays scoped, requests stay audited, and search stays permissioned. Policy-driven retention removes redundant, obsolete, and trivial content, so AI reasons from current, accurate records.
- ✓ **Governance that travels with your knowledge:** Work through governed links, not copies, so every share keeps your audit trail and ethical walls. When a file does leave, sensitivity labels travel with it through Microsoft Purview.

Key use cases

Ask in plain language, get cited answers:

Find precedent and prior work across matters, documents, and emails with AI-native search, powered by Ask iManage, which answers in natural language and cites its sources.

Find and reuse what the firm already knows:

Surface precedents, negotiated positions, and templates instantly, so every associate builds on the firm's best work instead of starting from a blank page.

Compare, review, and hold work to standard:

Compare a draft against the right prior version with built-in comparison, and hold agreements to your firm's standard with playbooks that flag deviations and missing clauses.

Responsible AI adoption:

Apply AI only to trusted, governed content. Accelerate research and review without sacrificing privilege, accuracy, or defensibility.

Secure external collaboration:

Share with clients and co-counsel through governed collaboration links — not email attachments — with expiration, permissions, and a full audit trail.

What sets iManage apart

#1

Built for how law firms work: Organized around matters, clients, and privilege levels, so security and governance reflect legal reality.

#2

A system of intelligence, not just storage: The iManage context fabric turns your knowledge into a governed intelligence layer AI can reason over, with full auditability at every step.

#3

AI you can defend: Every AI-assisted insight is grounded in governed content, cited, and traceable to source, so AI enhances legal judgment rather than introducing new risk.

#4

One governed foundation under every tool:

Through the iManage MCP Server, the tools your firm adopts reason from the same governed content, with ethical walls and audit preserved.

#5

Trusted by leading law firms:

iManage is Adopted by over 80 percent of the AmLaw 200 and manages millions of sensitive documents at scale.

80%+ of the AmLaw 200 trust

iManage — the established standard where security, governance, and defensibility aren't optional.
