

# CONTRACT INTELLIGENCE

# REPAPERING

## Deliver new insights and increase business value using AI to identify and extract information from legal documents.

Empower organizations with insight into business risks enabling them to make well-informed decisions with accurate and reliable information and expedite remediation efforts.

### Business Benefits

**Reduce cost** – Streamline and automate document processing tasks and conduct repapering analysis more quickly.

**Increase productivity** – Focus resources on value creating tasks – triaging impacted agreements or handling complex re-negotiations rather than data extraction tasks.

**Improve quality** – Ensure reviews encompass all critical, impacted provisions, increasing confidence in recommendations.

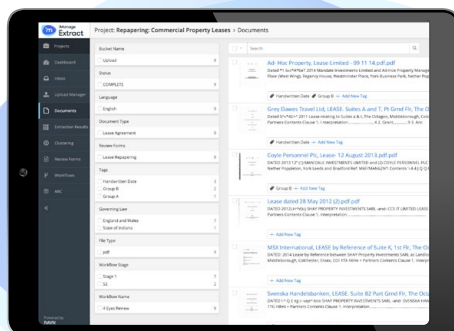

**Reduce risk** – Assure teams that the right data and information is assessed allowing them to make more informed decisions and respond faster to changing conditions.

**Decrease lead time** – Understand risks and areas of focus sooner to make quicker, more informed decisions expediting repapering efforts.

**Perform better** – Retain data to create a clause library, corporate templates and best practices, in order to capitalize on learnings and reduce risk with future agreements.

The iManage platform delivers an optimal user experience on a modern architecture that makes it easy to deploy and speeds adoption allowing customers to realize value quickly. Easily extend and enrich the platform using iManage APIs and library of connectors to integrate with third party data and document sources. With industry leading security and governance, as well as transformational AI capabilities, the iManage platform is built to deliver today and imagine tomorrow.

Government Agencies

## Using Contract Intelligence to support the repapering process

**Collect documents** – Quickly collect documents from a variety of sources, including iManage Work, or simply upload with drag and drop.

**Assess and refine repapering scope** – As documents are reviewed, assess repapering impact to the portfolio and refine the scope of repapering efforts to create an informed strategy that's resourced accurately and efficiently.

**Identify and organize documents** – Interpret similarities in agreements to cluster documents by type and identify duplicate documents allowing review prioritization and scope confirmation.

**Focus on critical provisions and extract information** – Capture key language in agreements using a toolbox of extractors that allow for efficient and flexible information gathering to identify agreements requiring further action.

**Report throughout process** – Continually export data for repapering review and visibility into remediation status. Information can be shared across teams and risks and opportunities can be escalated and addressed quickly.

**Determine impact and next steps** – With accurate information captured from the agreements, assess how to respond to identified risks, advise on any impact to the organization, and determine how best to address.

**Leverage the data to create amendments or new agreements** – Address issues within existing agreements and utilize the information extracted and learnings to ensure business is better prepared for future state.

## Key attributes to facilitate repapering reviews

**Collect** – Connect to Work 10 and other document repositories or simply upload documents using drag and drop.

**Cluster & Classify** – Use machine learning to cluster and classify documents based on content.

**Extract** – Use extractors from the Extractor Library or easily train new extractors using the Extractor Toolbox to identify key information from documents.

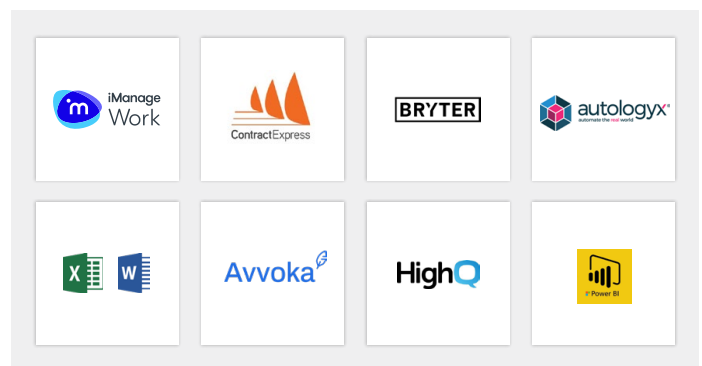

**Workflow** – Create workflows to manage training, review, and quality assurance processes.

**Search & Export** – Conduct bulk searches and connect to external systems using the iManage API to export data, create dashboards, and populate documents.
