

# CREATE AND SHARE KNOWLEDGE SECURELY, FROM ANYWHERE WITH **iMANAGE WORK MOBILITY FOR iOS**

## Key Benefits

- Enable users to work productively and securely from their own iOS device
- Provide a consistent experience across laptops and mobile devices
- Maintain granular control of data security with Mobile Device Management (MDM) and Mobile Application Management (MAM)
- Deliver powerful functionality designed specifically for knowledge workers
- Support a broad range of user types, from Executives to Power Users

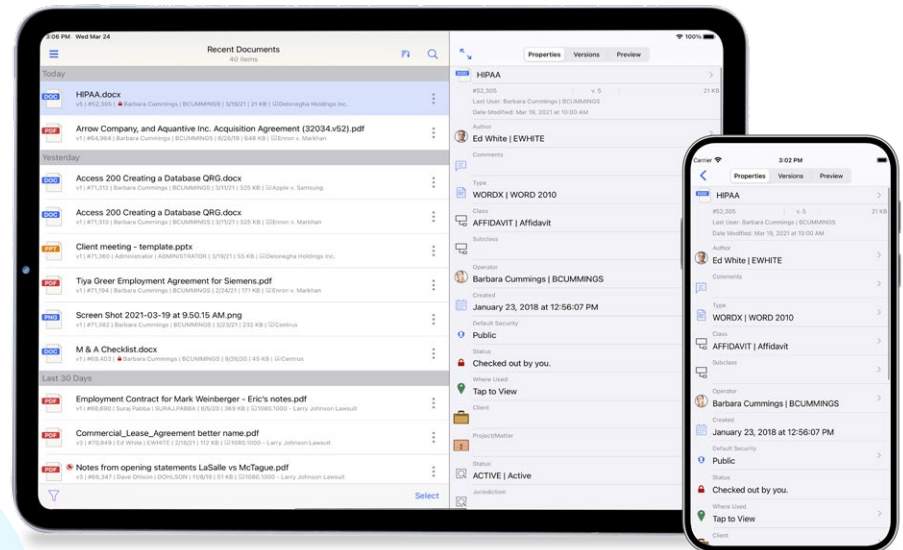

## Document + Email Management

- **iManage Work:** Secure document and email management
- **iManage Share:** Secure, governed file sharing and collaboration
- **iManage Drive:** Easy-to-use interface to iManage Work

The overarching goal of the iManage Work platform is to empower users to be productive and secure, wherever they are working. As the traditional workplace is displaced by a remote work environment, mobility has emerged as a critical driver of employee productivity. Knowledge workers need the ability to access information, work with it, and share it with team members, all on their own device, on their own time, while maintaining information security.

iManage Work Mobility for iOS was designed from the ground up to address this challenge. With Mobility, users can be productive from anywhere, and have a user experience consistent with the iManage Work platform. Users are able to effectively transition from their desktop to their mobile device without sacrificing productivity.

Mobility leverages industry-leading Microsoft Intune unified endpoint management for data protection. Intune incorporates core Microsoft technologies for identity systems, endpoint security, and AI and machine learning. Intune's deep integrations with Microsoft products increases usability and performance, while meeting the unique requirements of iManage users in highly secure and regulated industries like banking, finance, government, and legal services.

We selected iManage because it provided capabilities our professionals were longing for, and when we looked at some of the adoption issues we were having, we believed the better user experience would drive adoption.

Search your library with the personalized results you'd see in Work 10.

Mobility leverages industry-leading Microsoft Intune unified endpoint management for data protection. Intune's deep integrations with Microsoft products increases usability and performance, while meeting the unique requirements of iManage users in highly secure and regulated industries like banking, finance, government, and legal services.

### **Seamless experience with iManage Work 10**

Mobility has been built to mirror the iManage Work 10 experience, with a consistent look, workflow, and tools. The goal is to eliminate friction in usability and enable users to be immediately productive, with no additional training required. One example is Document Search – iManage Work's powerful and personalized search function will return the same results in the app as on the desktop, with the same tools for customizing and refining search results.

### **Powerful functionality specifically for your user's iOS devices**

Mobility includes rich sorting and filtering capabilities so the user can see their content how they want on their device. The app remembers the

settings so that the user can pick up where they left off with minimal context switching effort.

### **Empower more users from across your organization**

The user base for mobile applications has evolved from a relatively narrow group to include a broad range of job roles and responsibilities. Mobility has changed as well, and now supports job types from light editing and review through advanced operations like editing document properties or security, renaming files, or uploading new file versions, with the goal of making every user more productive.

### **Enable BYOD without Sacrificing Security or Governance**

Mobile Device Management (MDM) and Mobile Application Management (MAM) solutions allow organizations to control device access requirements and compliance at enterprise scale, while protecting apps and data granularly. Mobility pairs with an MDM solution to layer device-level policies and app-level policies. As a result, organizational data is kept secure in a defined container, separate from an end user's personal apps and data. iManage offers variants of iManage Work Mobility for iOS specific to

BlackBerry Dynamics, MobileIron, and Microsoft Intune.

### **Better Together: Mobility and Microsoft Intune**

Microsoft Intune delivers unique capabilities that enable deep integration between iManage Work and Microsoft apps, while ensuring that enterprise data remains secure. Intune also works in tandem with Microsoft Azure Conditional Access to enable state of the art mobile access security, with comprehensive controls for managing user and device identity.

### **The platform for making knowledge work**

For organizations that run on knowledge, iManage is the platform that gives you an edge. Our knowledge work platform empowers you to work together intelligently and securely, unlocking your productivity and expertise to drive better business outcomes. Every product we build aims to enable that core function. Our platform is focused on making knowledge work, because we recognize that knowledge is the engine that drives performance and the source of true value to our customers.
