

Give Microsoft Copilot a governed home for your most sensitive content

iManage
Making knowledge work

iManage connects Microsoft Copilot and Copilot Cowork to your organization's sensitive documents and email, so your teams can research, draft, and prepare with the knowledge they already have.

Copilot delivers the most value when it can work on the content that matters most. In many organizations, that content is scattered across file shares and on-premises systems, or locked down where AI can't reach it. iManage gives it a governed home on Azure, inside Outlook, Teams, and Office.

The iManage MCP Server, which appears as a plugin in Copilot and Cowork, connects Microsoft's AI directly to that content. Your teams ask a question or assign a task in the tools they already use, and Copilot and Cowork search and work with iManage alongside Microsoft 365. Legal, compliance, risk, and deal teams, the groups most cautious about AI, can put Copilot and Cowork to work on the matters that count most.

What your teams can do

Search iManage and Microsoft 365 together: Copilot or Cowork can answer from one prompt across both.

Work, not only read: Copilot or Cowork can create workspaces, folders, and documents in iManage.

Draft from your own precedent: Copilot or Cowork can find the closest agreement in iManage, draft it to match the current deal terms, and return an editable Word document.

Prepare for a call in minutes: Copilot or Cowork can combine matter content from iManage with recent email and calendar activity into one briefing.

Why organizations choose iManage for Copilot

More teams using Copilot: The teams that held back become active users because their content is governed.

More content for every prompt: Institutional knowledge that was scattered or locked away becomes available to Copilot.

Built into Microsoft 365: iManage works inside Outlook, Teams, and Office, so people stay where they already work.

Runs on Azure: Regulated content moves from file shares and on-premises systems to Azure, with data residency and customer-held keys.

> **Over the past decade, Microsoft and iManage have built a depth of relationship in the UK legal market that goes well beyond technology integration.**
